Art Unit: 1641

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-27, drawn to encapsulation vesicles comprised of a matrix and a ligand attached to a protective coating layer on the matrix, classified in class 436, subclass 527 and class 530, subclass 391.1.
- II. Claims 28-31, drawn to a method for quantifying an analyte in a sample by a competitive ligand binding assay using donor-acceptor luminescence as a means of detection, class 436, subclass 544.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the vesicles of Invention I which require specific components in a particular configuration are not required as elements in the analysis methods of Invention II. Thus, the two inventions, Inventions I, drawn to a composition, and Invention II, drawn to a method of analysis which does not require the particulars of Invention I, are drawn to distinct inventions which have different modes of operation and function. Additionally, it is noted that a patentability determination for each of the two inventions involves different considerations. For Invention I, a patentability determination would involve the consideration of the patentability of a composition requiring specific components in a particular configuration independent of the method of use of the composition. For Invention II, a patentability determination would involve the consideration of the patentability of the combination of assay method steps, none of which requires the use of the composition of Invention I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification requiring divergent fields of search in both the patent and technical literature, restriction for examination purposes as indicated is proper.

3. Applicants are advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Applicants are advised that in accordance with the court decisions in *In re Ochiai*, {71 F.3d 1565, 37 USPQ2d 1127 (Fed. Cir. 1995)} and *In re Brouwer* {77 F.3d 422, 37 USPQ2d 1663 (Fed. Cir. 1996)}, in the event that a product claim is found to be allowable, a method of use claim ***which is of the same scope as the allowed product claim*** may be rejoined with the allowed product claim.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mary E. (Molly) Ceperley whose telephone number is (703) 308-4239. The examiner can normally be reached from 8 a.m. to 5 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le, can be reached on (703) 305-3399. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-7230.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1234.
